

Mobile Inventory

bisTrack has two mobile stock applications – Mobile PO/Stock Verification, and Mobile Inventory Count. These run on Microsoft Windows Mobile® devices as an extension of bisTrack, and access real-time data directly from the centralized bisTrack system.

Un-tether your employees, and allow them to access bisTrack wherever they may be. Studies show that employees with a mobile extension to their office systems are:

- More productive.
- Make fewer errors.
- Require little training to operate the familiar user interface.

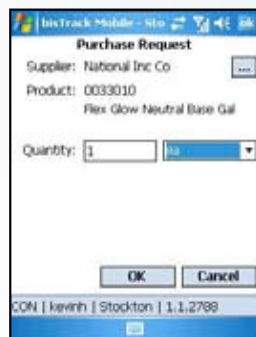

Stock Management without clipboards, delays or redundant data entry

The two stock management applications let your staff roam within your facilities carrying only lightweight, handheld devices to count inventory, verify stock levels and prices, and generate purchase orders.

Mobile PO/Stock Verification

Stock verification is faster and more accurate when staff can go to a bin or stock location and immediately verify on their mobile handheld device that what's in bisTrack is consistent with what's on the floor. While at the stock location, your staff can:

- Verify stock levels.
- Confirm bin label descriptions and store pricing are accurate.
- Print new labels if necessary. Input or scan the item, then make changes on the handheld and print a new label.
- Request a purchase order to replenish stock.

Request a PO as soon as you find stock is low.

Reprint a label found with incorrect item number, bin description or price.

Use a Windows Mobile device to quickly verify stock, bin description and store pricing.

One supplier. One integrated system. Only Progressive Solutions.

Mobile Inventory Count

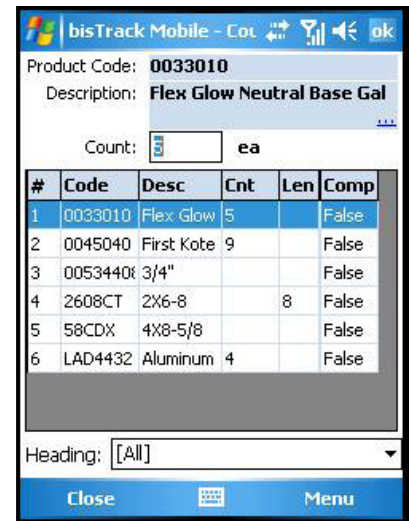

Your staff will perform periodic inventory counts faster and with greater accuracy by entering data directly into bisTrack using mobile handheld devices instead of clipboards and tally sheets

- Scan or enter the item number being counted.
- Enter the inventory count.
- Upload your count to bisTrack once finished.

The Windows Mobile advantages: Greater Productivity and Fewer Errors

bisTrack's Mobile applications work with any Microsoft Windows Mobile powered devices that run Windows Mobile 5.0 or greater.

With over 40 form factors, including smartphones, PDAs, and industrial handheld computers, the Windows Mobile platform ensures that there's a device type uniquely suited for your organization, your team, and your role. Optional input devices, such as keyboards, touch screens and barcode scanners, are available for many Windows Mobile devices to help you access and input the business information you need even when you are away from your desk.

Counting inventory is faster and more accurate. Simply scan or enter the item number, and its count.

Progressive Solutions has helped lumber and building material dealers and distributors from around the world improve their processes and their bottom line.
