

## Product Architecture and Design

At Progressive Solutions, we design our software using the very latest in proven development technologies and techniques. We pride ourselves in the quality of our software and in the technical advancements we incorporate. The result: robust systems that perform solidly and are easy to use.

### Accurate information makes for better business

lumberTrack's advanced architecture offers features of interest to companies large and small:

- **High performance** over LANs and WANs, for real-time access to centralized data.
- **Scalability** to add new users, locations, divisions/companies, customers, products. We have reference systems with 5 to 1200 users, supporting a medley of business models and product lines.
- **Industry standard Technologies**, so that training users is easy.
- **Ease of Integration** with 3rd party software and corporate/financial systems through CSV and XML file exchange.
- **Cost-effective**, easy deployment and ongoing support.
- **Upgradeable** to make use of new features and technologies, such as .NET and the Internet.

## Product Architecture and Design ...continued.

### Flexible, easy information access

lumberTrack's major design components are:

- **User Interface.** Familiar and intuitive Windows® screens that are user configurable so you view the information you want to see. Simple functionality to extract the data on the screen into your clipboard or Excel. Terminal servers for remote users and .NET-ready for the future.
- **Application Logic.** The heart of lumberTrack, optimized for high performance in Windows.
- **Data Warehouses.** Data warehouses store transaction and inventory information, using industry terminology in its data dictionary so that access to information is fast, flexible and intuitive.
- **Reporting.** In addition to extracting data from windows, users can access data through lumberTrack's simple Quick Answer Listing user report writer. Users can also access the data cubes provided or access information directly from the base using SRS, Crystal Reports or other reporting software to generate custom reports.

### Single site simplicity; Multiple site performance

Multiple users at a single site are connected so that business information from multiple functions is available to all users. Likewise, lumberTrack addresses the needs of multiple-site operations with system configurations that are scalable, high-performance and connected in real-time for instantaneous access to accurate information.

**Progressive Solutions has helped wood products and building material companies from around the world improve their processes and their bottom line.**
