

A truly progressive solution.

With **secureHosting™** by **Progressive Solutions** you make the decisions on how to operate your ERP solution. We deliver a fully integrated solution, so you do not have to invest or maintain an IT infrastructure needed to support it. Rest easy enjoying cost savings, exceptional reliability, security and around the clock accessibility from anywhere in the world. Now you can focus on your core business and let Progressive Solutions handle your technology requirements.

One supplier. One integrated system. Only Progressive Solutions.

Focus On What You Do Best

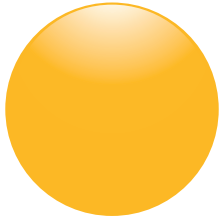

Let's face it. With business depending more and more on technology, dealing with computer viruses, power outages and other threats is more important than ever. Unfortunately, building and maintaining a secure, fully redundant IT environment is usually well beyond the reach of in-house expertise and financial resources.

That's where **Progressive Solutions** comes in. We understand that successful businesses depend on efficient and secure IT infrastructures. That's why leading companies depend on us for everything from computer and software installation to sophisticated offsite hosting of corporate data and software systems.

With **secureHosting™**, our highly skilled, Microsoft Certified technical specialists can manage all your technology requirements using the latest best-in-class IT infrastructure. We manage the servers, we perform the data backups and we administer the software. At last, there's a way to reduce the complexity, risk and cost of your IT operations. Leave the complicated ever-evolving technology to us, so you can focus your time, energy and resources where it matters most, on your core business.

Innovative, Secure and Accessible

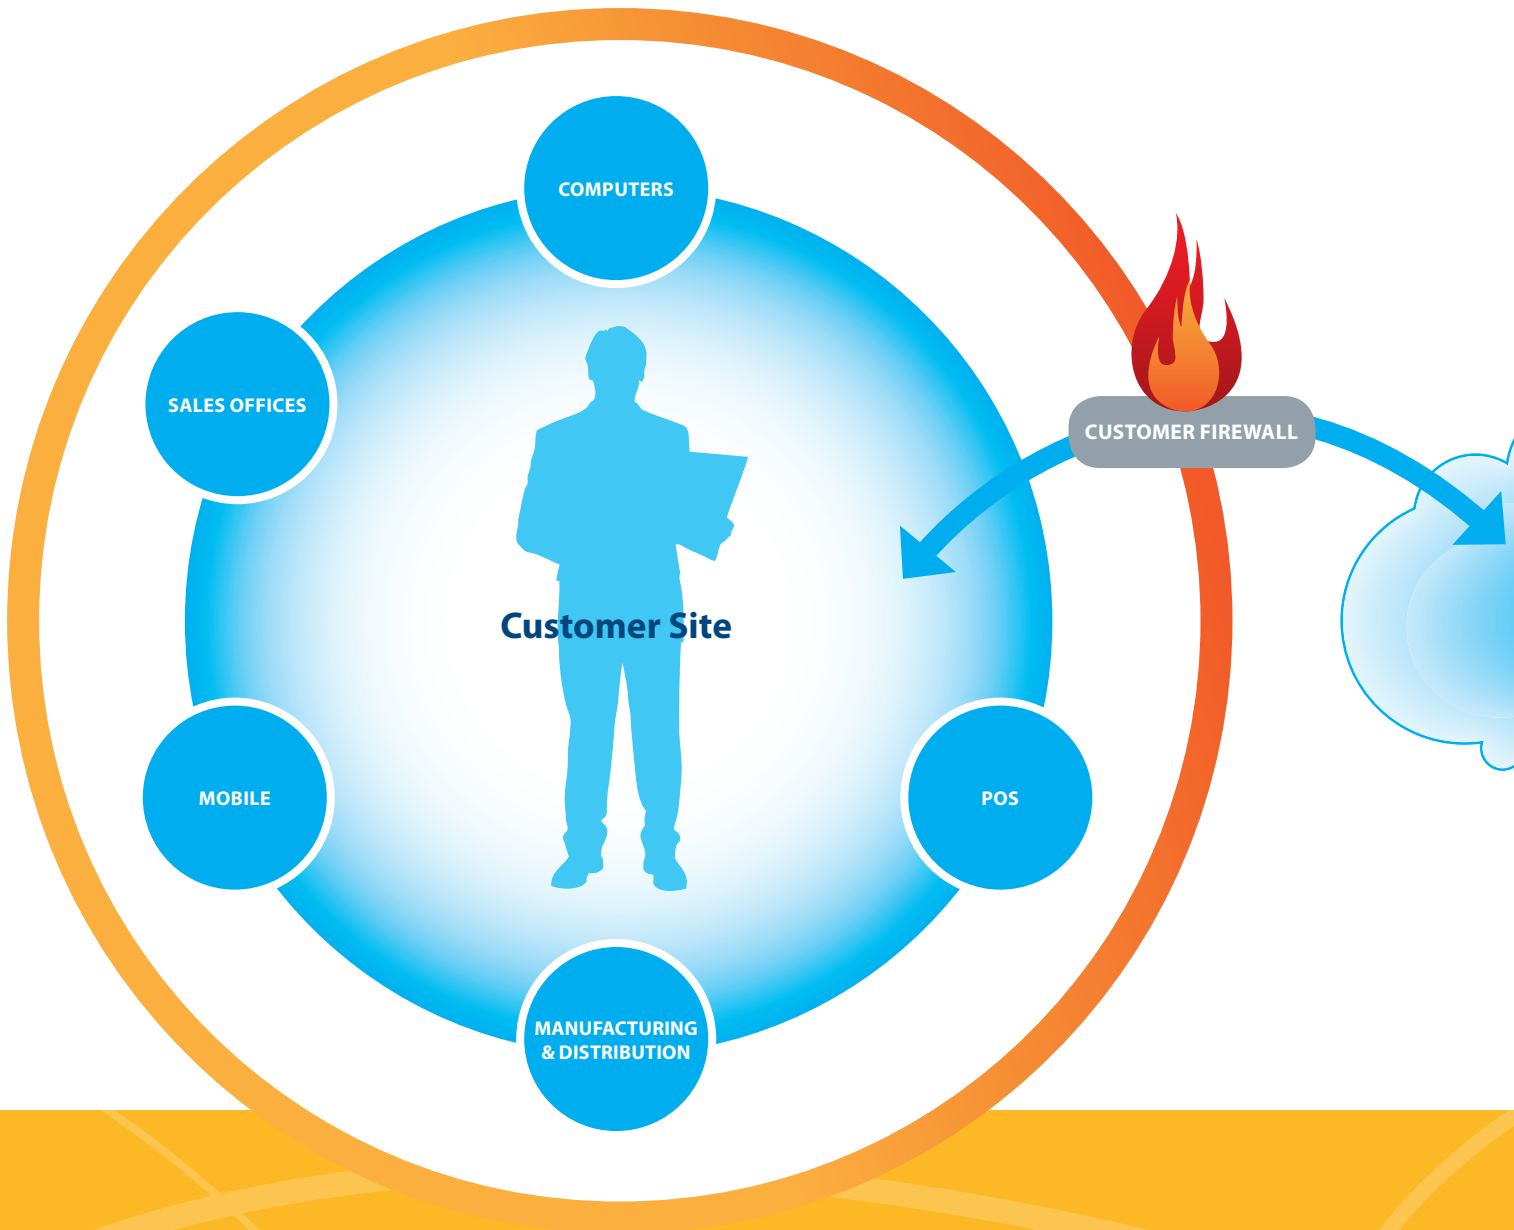

secureHosting™ is an innovative, completely safe and proven technology that allows you to manage all aspects of your business through the Internet. Now your office can be as mobile as you are, with around the clock access that literally puts your entire business at your fingertips. Access to real time information, whether you're in a hotel room or in the middle of your warehouse, gives you the speed and agility to respond immediately to customer needs and continually shifting business realities. In a competitive business environment, it's simply no longer an option to risk customer loyalty and satisfaction by having unreliable systems that cause delays in critical information.

Introducing secureHosting™

Today, your customers have many choices and ensuring their loyalty is a full time challenge. The only acceptable option is a reliable system with the ability to provide immediate answers.

secureHosting™ service is a cost-efficient solution that provides optimum performance while reducing your upfront and ongoing costs and minimizing the complexity of managing potentially complicated IT infrastructure for your business. You continue to get the remarkable benefits of our ERP software, only now it's offered in a secure hosted environment. The bulk of the IT infrastructure, like servers and disaster recovery systems, is no longer your responsibility. We handle all of the backups, upgrades and replacements so you don't have to. Many of the original capital costs are gone and so are many of the even greater and often unknown costs associated with ongoing maintenance. Progressive Solutions does all of that, more reliably, more securely and with more dedicated resources than any non-tech company could ever afford to do. Our Class 1 Data Center provides redundant power, UPS generator backup, filtered air, a Halon fire system, multiple connections to the Internet backbone and complete physical security. Basically all the hardware you need, besides your local PCs, is an Internet connection and a local area network and you're good to go.

Totally Safe

24 x 7 System Monitoring and Network Administration
